PROJECT REPORT

PROJECT NAME : SMART SOLUTIONS FOR RAILWAYS

TEAM ID : PNT2022TMID33715

TEAM LEADER : PRAKASH S

TEAM MEMBERS : SURYA KUMAR N

VIGNESH G

SANKAR S

1. INTRODUCTION

1.1 Project Overview

Due to its advantages, trains are one of the most popular ways of transportation for middle class and poor people. The probability of thefts and mishaps including chain snatching, derailments, and fire incidents is rising concurrently. We developed an application that users can access after purchasing tickets as a means to prevent or, more accurately, to stop all such cruelty. This app resolves problems by alerting TC and RPF via text message with a single click. To store passenger data for our project, we make use of the Node-Red service, app development, and IBM cloud platform.

1.2 Purpose

The purpose of this project is to report and get relived from the issues related to trains.

2. LITERATURE SURVEY

2.1 Existing problem

- A Web page is designed for the public where they can book tickets by seeing the available seats.
- After booking the train, the person will get a QR code which has to be shown to the Ticket Collector while boarding the train.
- The ticket collectors can scan the QR code to identify the personal details.
- A GPS module is present in the train to track it. The live status of the journey is updated in the Web app continuously.
- All the booking details of the customers will be stored in the database with a unique ID and they can be retrieved back when the Ticket Collector scans the QR Code.

2.2 References

S.NO	TITLE	AUTHOR	YEAR	KEY TECHNOLOGY

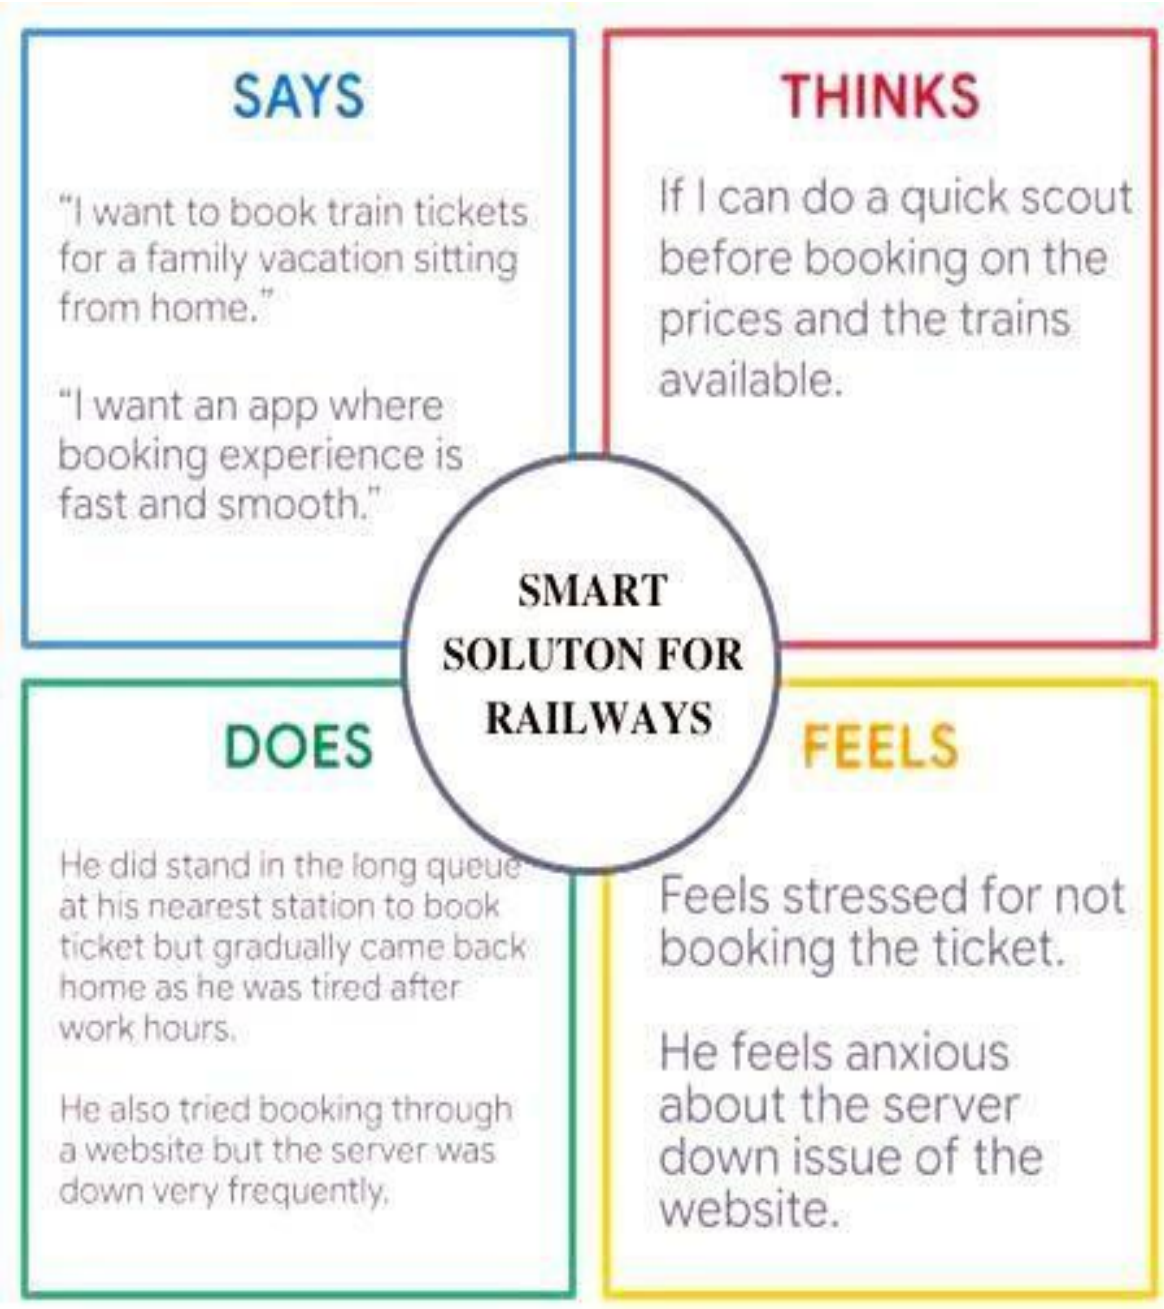
2.3 Problem Statement Definition

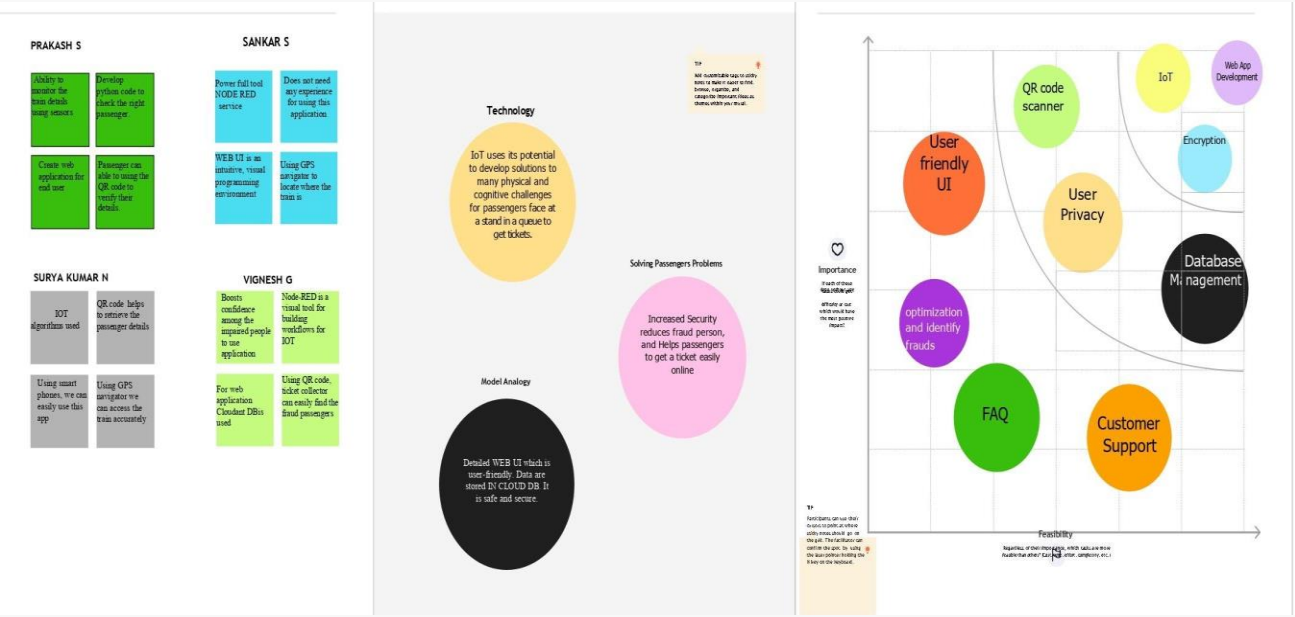
Smart Solutions for railways are designed to reduce the work load of the user and the use of paper.

3. IDEATION & PROPOSED SOLUTION

3.1 Empathy Map Canvas



3.2 Ideation & Brainstorming



3.3 Proposed Solution

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Problems in the railways like robbery, fire accidents etc..
2.	Idea / Solution description	Developing an app for the passengers.
3.	Novelty / Uniqueness	The passengers can send an alert to the respective officials during the travel time through the app when they are in trouble so that they can easily solve it.
4.	Social Impact / Customer Satisfaction	Usage of this app can be a great relief to the passengers, so that they can travel without any fear.
5.	Business Model (Revenue Model)	5000

6.	Scalability of the Solution	This solution will be useful for passenger while traveling. They can use the app between the time of their travel. The users will fell more secured, in-case of an emergency by simply clicking on a button the alert signal will be sent to the respective officials and the corresponding measures will be taken.

3.4 Problem Solution fit

Purpose /Vision

1. CUSTOMER SEGMENT(S)

Passengers, who are all standing
In a queue for a long time to get
a train ticket.

5. CUSTOMER CONSTRAINTS

The constraints that the passenger face while using an application either book a ticket or cancel a ticket with refund.

8. AVAILABLESOLUTIONS

Using WEB UI, the information details
About passengers are stored in cloud
DB through which QR code will display
Correct information about passengers.

2. JOBS-TO-BE-DONE /PROBLEMS

Using an online web application to booking
Ticket through online easily.

6. PROBLEM ROOT CAUSE

Due to the fraud person travel in the
Train, while the customers are lose their
Seats.

9.BEHAVIOUR

Finding the right person, who
are all travelling the train using
Unique ID along with QR code
Due to this, no one can misuse
their seats.

3. TRIGGERS

Some of the triggers are advertisements on television and social media.

7.YOUR SOLUTION

Due to booking a seat for travelling
In a train, some illegal person occupy
Seats. so for this issue using Internet
Of things to detect such person through
Ticket collectors.

10.CHANNELS OF BEHAVIOUR

With help of web application passenger
Can easily use the application without
Any more skill or knowledge

4. EMOTIONS BEFORE/AFTER

With the physical effect to buy a ticket
for standing in a queue, Passengers easily
book a ticket happily within the home.

4. REQUIREMENT ANALYSIS

4.1 Functional requirement

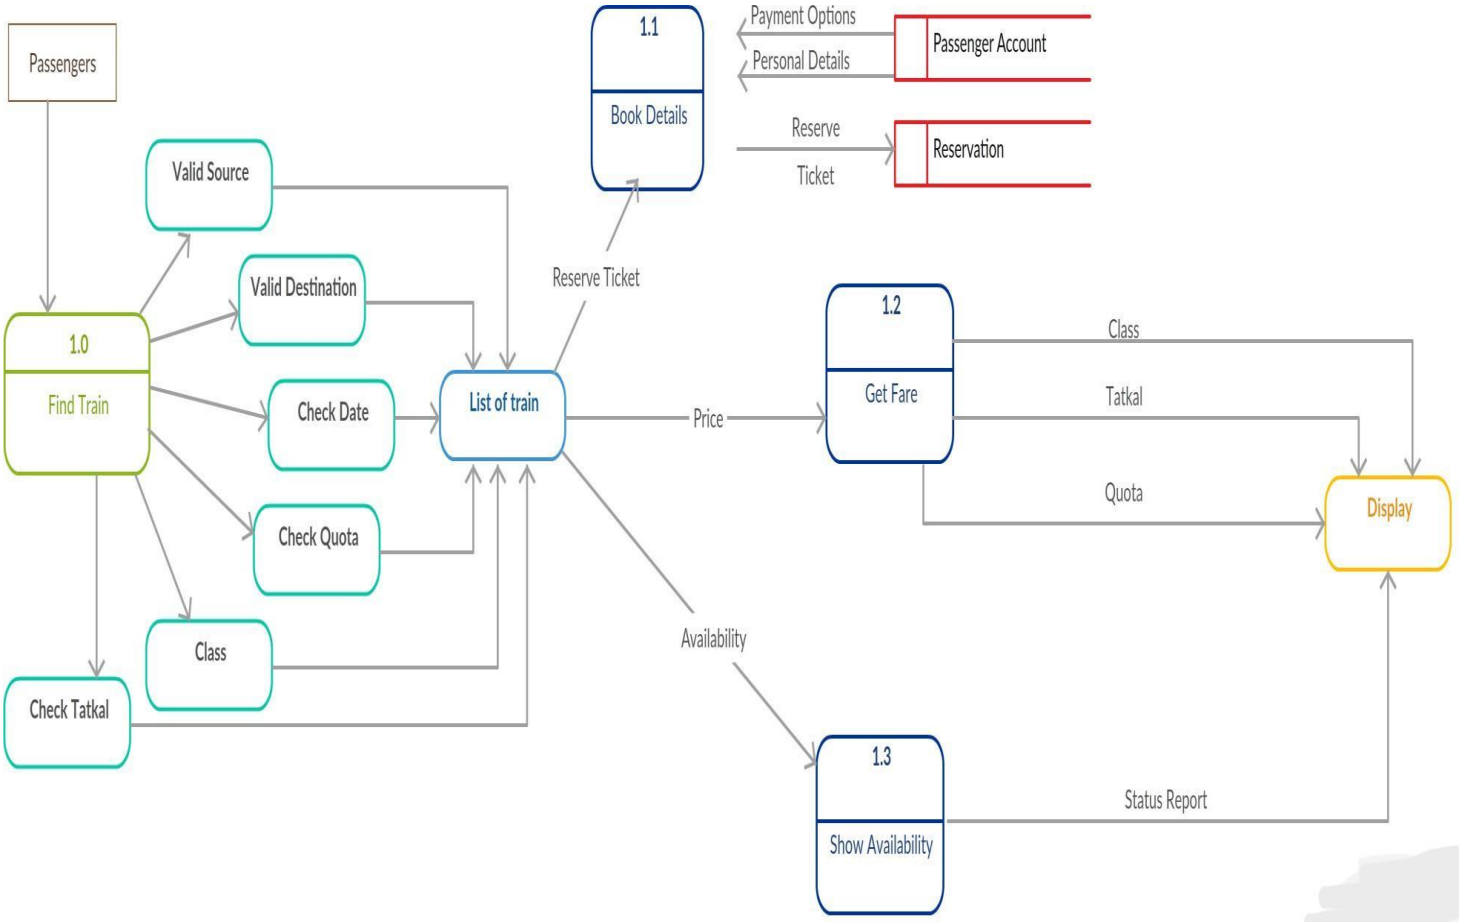
FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	User Registration	Registration through Online Registration through Gmail
FR-2	User Confirmation	Confirmation via Email Confirmation via OTP
FR-3	Application installation	The application is installed through the given link
FR-4	User access	Access the app requirements

4.2 Non-Functional requirement

FR No.	Non-Functional Requirement	Description
NFR-1	**Usability**	● The app can be used during the traveling time ● Easy and simple ● Efficiency is high
NFR-2	**Security**	By clicking on the icon, the alert will be given to the respective officials
NFR-3	**Reliability**	Highly reliable to use
NFR-4	**Performance**	Low error rate
NFR-5	**Availability**	Free source
NFR-6	**Scalability**	It is scalable enough to support many users at the same time

5. PROJECT DESIGN

5.1 Data Flow Diagrams



5.2 Solution Architecture

As trains are one of the most preferred modes of transportation among middle class and impoverished people as it attracts for its amenities. Simultaneously there is an increase at risk from thefts and accidents like chain-snatching, derailment, fire accident. In order to avoid or in better words to stop all such brutality we came up with a solution by providing an application which can be accessed by the user after booking their tickets. With a single click this app addresses issues by sending a text message to TC and RPF as an alert. In our project we use Node-Red service, app-development, IBM cloud platform to store passenger data.

5.3 User Stories

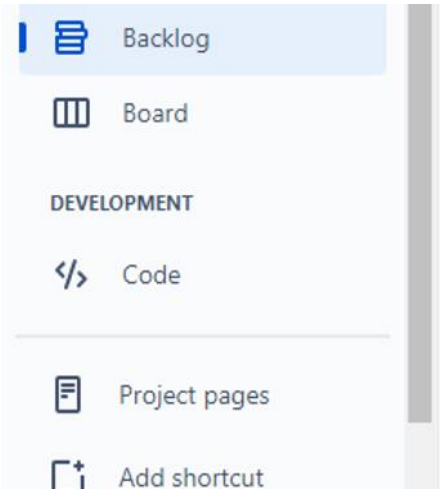
User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
PASSENGER (Mobile user)	Booking registration	USN-1	As a passenger, I book the ticket for the journey by entering my personal information.	I can access the web link to install the application.	High	Sprint-1
	Confirmation	USN-2	As a passenger, I will receive confirmation of the booking once I have registered for the application	I can receive confirmation email & click confirm.	High	Sprint-1
	Application registration	USN-3	As a passenger, I can register for the application through the weblink.	I can register & access the application through google login.	Low	Sprint-2
	Application access	USN-4	As a passenger, I can access the application during my travel for resolving my issues.		Medium	Sprint-1

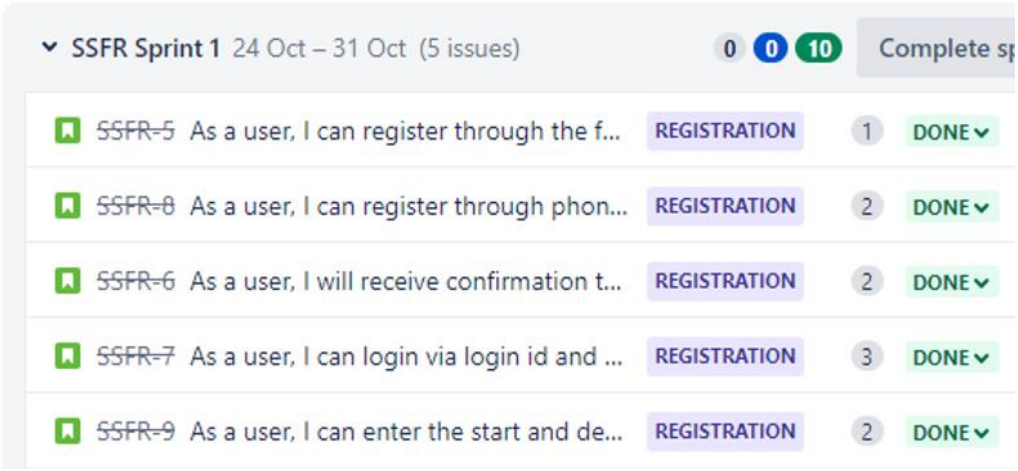
6. PROJECT PLANNING & SCHEDULING

6.1 Sprint Planning & Estimation

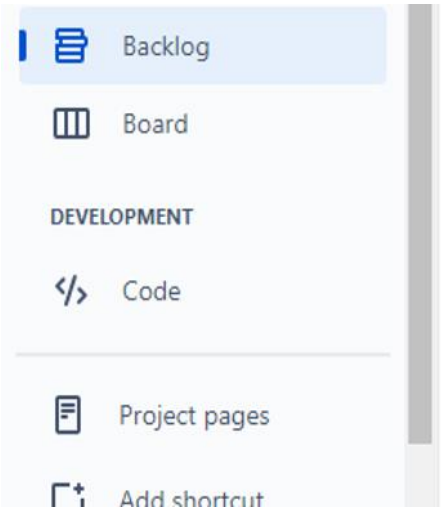
6.2 Reports from JIRA

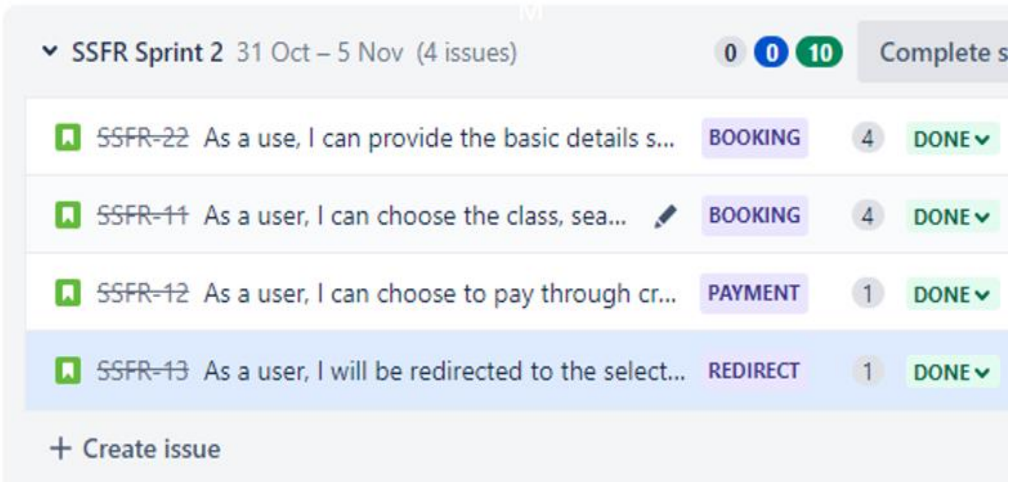
SPRINT 1



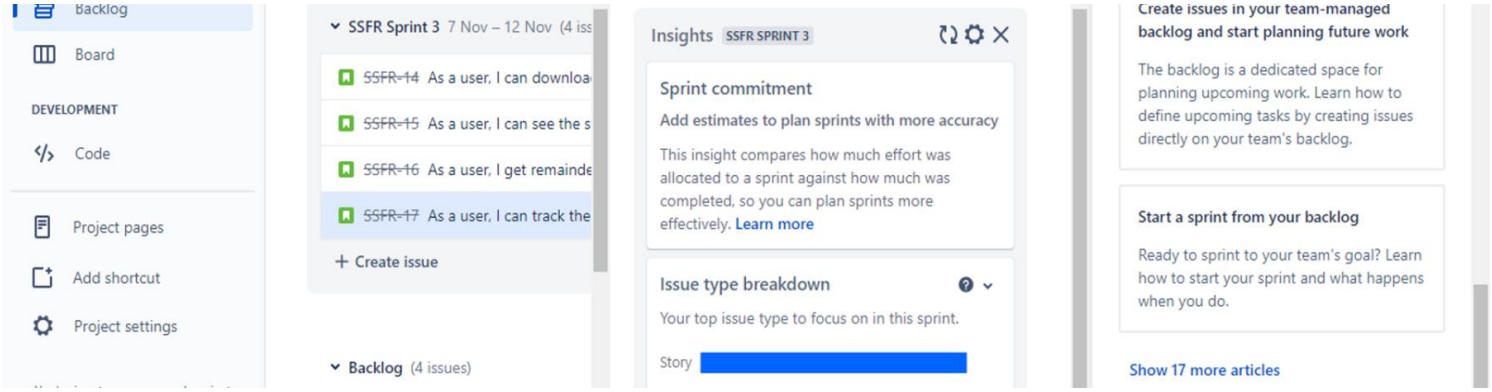


SPRINT 2

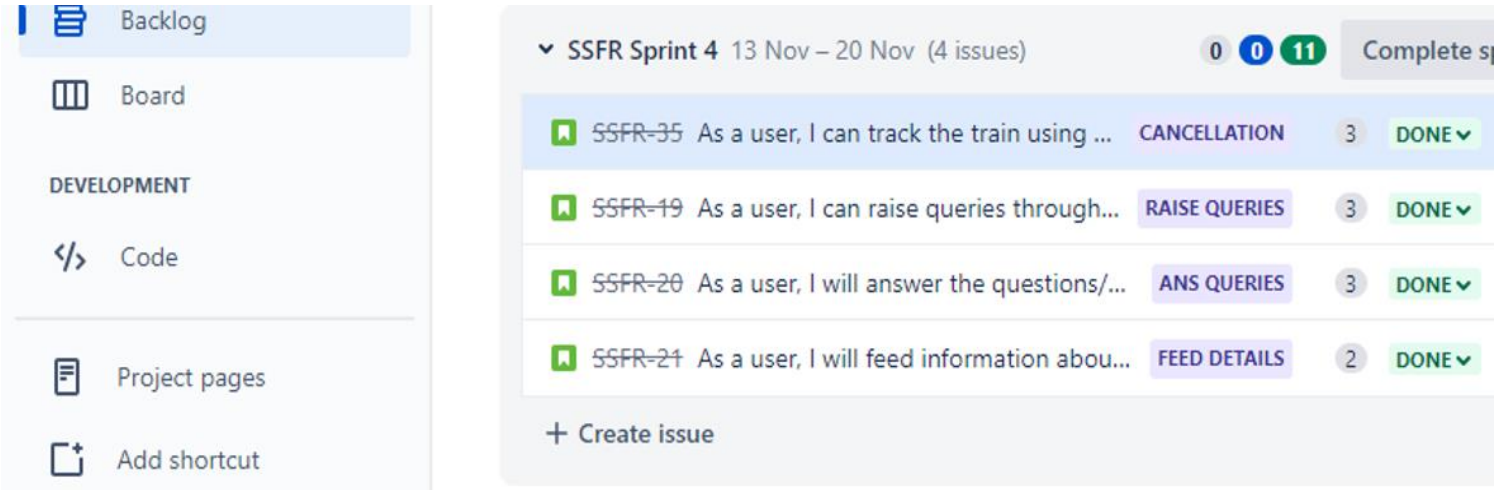




SPRINT 3



SPRINT 4



7. CODING & SOLUTIONING

7.1 Feature 1

- IoT device
- IBM Watson Platform
- Node red
- Cloudant DB
- Web UI
- MIT App Inventor
- Python code

7.2 Feature 2

- Login
- Verification
- Ticket Booking
- Adding rating

8. TESTING AND RESULTS

8.1 Test Cases

Test case 1

Date	15-Nov-22
Team ID	PNT2022TMID33715
Project Name	Smart Solutions for Railways
Maximum Marks	4 marks

Test case ID	Feature Type	Component	Test Scenario	Pre-Requisite	Steps To Execute	Test Data	Expected Result	Actual Result	Status	Commments	TC for Automation(Y/N)	BUG ID	Executed By
1	Functional	Registration	Registration through the form by Filling in my details		1.Click on register 2.Fill the registration form 3.click Register		Registration form to be filled is to be displayed	Working as expected	PASS				PRAKASH
2	UI	Generating OTP	Generating the otp for further process		1.Generating of OTP number		user can register through phone numbers and to get otp number	Working as expected	PASS				SANKAR
3	Functional	OTP verification	Verify user otp using mail		1.Enter gmail id and enter password 2.click submit	Username: railways password: admin	OTP verifed is to be displayed	Working as expected	FAIL				VIGNESH
4	Functional	Login page	Verify user is able to log into application with InValid credentials		1.Enter into log in page 2.Click on My Account dropdown button 3.Enter InValid username/email in Email text box 4.Enter valid password in password text box 5.Click on login button	Username: railways password: admin	Application should show 'Incorrect email or password ' validation message.	Working as expected	FAIL				SURYA KUMAR
5	Functional	Display Train details	The user can view about the available train details		1.As a user, I can enter the start and destination to get the list of trains available connecting the above	Username: railways password: admin	A user can view about the available trains to enter start and destination details	Working as expected	PASS				PRAKASH

Test case 2

Date	14-Nov-22
Team ID	PNT2022TMID33715
Project Name	Smart Solutions for Railways
Maximum Marks	4 marks

Test case ID	Feature Type	Component	Test Scenario	Pre-Requisite	Steps To Execute	Test Data	Expected Result	Actual Result	Status	Comments	TC for Automation(Y/N)	BUG ID	Executed By
1	Functional	Booking	user can provide the basic details such as a name, number, etc		1. Enter the member's details like name, number.		Tickets booked to be displayed	Working as expected	Pass				VIGNESH
2	UI	Booking seats	User can choose the train, starting and ending destination, date of travel.		1. Known to which train is available		known to which the seats are available	Working as expected	Fail				SURYA KUMAR
3	Functional	Payment	user, I can choose to pay through credit Card/debit card/UPI.		1.user can choose payment method 2.payment method		payment for the booked tickets to be done using payment method through either the following methods credit Card/debit card/UPI.	Working as expected	Fail				SANKAR
4	Functional	Redirection	user can be redirected to the selected		1.After payment the user will be redirected to the previous page		After payment the user will be redirected to the previous page	Working as expected	Pass				PRAKASH

Test case 3

Date	15-Nov-22
Team ID	PNT2022TMID33715
Project Name	Smart Solutions for Railways
Maximum Marks	4 marks

Test case ID	Feature Type	Component	Test Scenario	Pre-Requisite	Steps To Execute	Test Data	Expected Result	Actual Result	Status	Commnets	TCfor Automation(Y/N)	BUG ID	Executed By
1	Functional	Ticket generation	a user can download the generated e ticket for my journey along with the QR code which is used for authentication during my journey.		1.Enter method of reservation 2.Enter name,age,gender 3.Enter how many tickets wants to be booked 4.Also enter the number member's details like name,age,gender		Tickets booked to be displayed	Working as expected	Pass				PRAKASH
2	UI	Ticket status	a user can see the status of my ticket Whether it's confirmed/waiting/RAC		1.known to the status of the tickets booked		known to the status of the tickets booked	Working as expected	Fail				SANKAR
3	Functional	Reporting issues	user can access the reporting portal once the jouney begins		1. reporting		issues have been reported	Working as expected	Pass				VIGNESH

Test case 4

Date	16-Nov-22
Team ID	PNT2022TMID33715
Project Name	Smart Solutions for Railways
Maximum Marks	4 marks

Feature Type	Component	Test Scenario	Pre-Requisite	Steps To Execute	Test Data	Expected Result	Actual Result	Status	Commnets	TC for Automation(Y/N)	BUG ID	Executed By
Functional	Ticket cancellation	user can cancel my tickets there's any Change of plan		1.tickets to be cancelled		Tickets booked to be cancelled	Working as expected	Fail				PRAKASH
Functional	Rate	a user will feed rating about the train journey		1.information feeding on trains		information feeding on trains	Working as expected	Pass				SURYA KUMAR

9. ADVANTAGES

- The passengers can use this application, while they are travelling alone to ensure their safety.
- It is easy to use.
- It has minimized error rate.

10. DISADVANTAGES

- Network issues may arise.

11. CONCLUSION

Almost all the countries across the globe strive to meet the demand for safe, fast, and reliable rail services. Lack of operational efficiency and reliability, safety, and security issues, besides aging railway systems and practices are haunting various countries to bring about a change in their existing rail infrastructure. The global rail industry struggles to meet the increasing demand for freight and passenger transportation due to lack of optimized use of rail network and inefficient use of rail assets. Often, they suffer from the lack in smart technologies and latest technological updates to provide the most efficient passenger services. This is expected to induce rail executives to build rail systems that are smarter and more efficient. The passenger reservation system of Indian Railways is one of the world's largest reservation models. Daily about one million passengers travel in reserved accommodation with Indian Railways. Another sixteen million travel with unreserved tickets in Indian Railways. In this vast system, it is a herculean task to efficiently handle the passenger data, which is a key point of consideration now-a-days. But the implementation of the latest technological updates in this system gradually turns inevitable due to increasing demand for providing the most efficient passenger services. Handling the passenger data efficiently backed by intelligent processing and timely retrieval would help backing up the security breaches. Here we've explored different issues of implementing smart computing in railway systems pertaining to reservation models besides pointing out some future scopes of advancement. Most significant improvements have been evidenced by more informative and user-friendly websites, mobile applications for real-time information about vehicles in motion, and e-ticket purchases and timetable information implemented at stations and stops. With the rise of Industry, railway companies can now ensure that they are prepared to avoid the surprise of equipment downtime. Like above mentioned, the developed application of our project can lead the passenger who travel can travel safely without any fear.

12. FUTURE SCOPE

This application is ensured for safety for the passengers while they are travelling alone as well as they travel with their family or friends. In future, this application may also be used by passengers who travel through bus. By further enhancement of the application the passengers can explore more features regarding their safety.

```
        else:
            return None
```

OTP GENERATION

```
import os
import math
import random
import smtplib

digits = "0123456789"
OTP = ""

for i in range (6):
    OTP += digits[math.floor(random.random()*10)]

otp = OTP + " is your OTP"
message = otp
s = smtplib.SMTP('smtp.gmail.com', 587)
s.starttls()

emailid = input("Enter your email: ")
s.login("YOUR Gmail ID", "YOUR APP PASSWORD")
s.sendmail('&&&&&&',emailid,message)

a = input("Enter your OTP >>: ")
if a == OTP:
    print("Verified")
else:
    print("Please Check your OTP again")
```

OTP VERIFICATION

```
import os
import math
import random
import smtplib

digits = "0123456789"
OTP = ""

for i in range (6):
    OTP += digits[math.floor(random.random()*10)]
```

```
otp = OTP + " is your OTP"
message = otp
s = smtplib.SMTP('smtp.gmail.com', 587)
s.starttls()

emailid = input("Enter your email: ")
s.login("YOUR Gmail ID", "YOUR APP PASSWORD")
s.sendmail('&&&&&&',emailid,message)

a = input("Enter your OTP >>: ")
if a == OTP:
    print("Verified")
else:
    print("Please Check your OTP again")
```
